

GALAXY NEWS

“News radio” meets “Men in Black” meets “30 Rock”

Stories from a galactic news station on Earth, in the year 4019.

The first half of the show will emulate a typical news bulletin from the year 4019, presenting a fruitful society who learned to live in harmony with its environment as well as with species from other planets, all in a comical-satirical manner.

The second half will be focused behind the scenes and on character interaction.

The main plot will be the missing piece of information from human history between the years 1566 and 3516, which we will try and find with the help of a smarter than average humanoid named Saint Noodles, from the planet Optylon, in order to save the planet from annihilation by a commission who saw early human history and decided we should all be exterminated.

Every episode will comprise of a news bulletin followed by the discovery of an important historical fact, which will be used as evidence in the hopes of restoring Earth’s faded image in the eyes of the Sustainability Trading District.
